VERTIO WALL SYSTEM

# Vertio Wall System

## **A minimalist expression of seamless functionality**

The Vertio Wall System is designed for flexible living. Equally at home in an inner-city apartment or an expansive living space, the modular design allows you to build the system that fits your lifestyle and your space.

## **Defined by detail**

Every component has been meticulously developed by the King in-house design team and finished in the finest materials. The natural warmth of premium timber veneer contrasts effortlessly with powder coated metal components.

## **Designed for flexibility**

Combine customised components to achieve the perfect configuration. Adjustable vertical supports can be wall mounted, or compression mounted between the floor and ceiling. Refined shelves and cabinets, secured in place by sculpted shelf brackets can be positioned at various heights.

# Mounting Options

## Floor to Ceiling Mounted

When compression mounted, Vertio can be positioned against a wall or used as a room divider. Mounted on top and bottom jacks, the vertical poles run from the floor to ceiling, extending to a maximum height of three metres. The jack mounts can be adjusted to allow for subtle variations in floor height.

## Wall Mounted

The wall mount sits elegantly off the wall. Extending from the floor, each vertical pole is fixed to the wall at a ninety-degree angle. The pole length can be adjusted to accommodate various heights. As with compression mount, the bottom jack allows for slight floor height variation.

# Customised Design

## Premium Finishes

Modular components are available in three timber finishes. American Walnut champions the rich depth of the natural timber. The brushed finish of Congo and Smoked Oak accentuates the natural timber grain.

## Modular Components

Customise your Vertio Wall System with a combination of three modular components.

### Fold-down cabinet

An integrated mechanism gently lowers the fold-down door. The internal glass shelf can be set at three height options. Cabinets feature a waterfall detail, with the timber grain flowing seamlessly down each side.

### Twin-door cabinet

The soft-close doors open from the top or bottom. The internal glass shelf can be set at five height options. Doors with integrated handles angled to complement the shelves deliver a streamlined sophistication.

### Shelf

Angled on all sides, the shelves are secured by sculpted brackets and can be repositioned easily across different heights.

# Customisable Sizes

Adjustable components allow you to build a wall system that fits perfectly in your space. Vertical supports are available in four different sizes and can be extended to the exact height required.

# Planning and Installation

The comprehensive Vertio Wall System planning and installation guides provide you with an easy to follow checklist and all the information needed to understand the specific requirements of each mounting method.
